

Stop losing customers and watch your base grow

Customers complaining it freezes? Customers vanishing without a word? All day teaching people to install? **That ends now.**

This page: <https://ajuda.solutionsapp.site/en/why-sell/>

Works on your customer's TV

Samsung, LG, Roku, Fire TV, Android TV, Apple TV, phone and computer. You never lose a sale because of the TV.

Hidden DNS, customers stay online

MaxPlayer hides the customer's DNS. With a DNS just for MaxPlayer, an attack or block on the public DNS won't take down people on the app.

DNS 1 and DNS 2 in one login

One route freezes? The customer switches to the other in seconds, without calling you.

Phone sign-in

The customer points the camera at the QR code and is in. Less support for you.

Know who will cancel before they do

The panel's **ACTIVITY** column shows each customer's last access. Gone for days? Reach out before they cancel.

Logins created in seconds

From the Telegram bot, Sigma or your own system: the login is ready instantly.

Solutions hands you everything ready: tutorials to send customers, a bot that creates logins in seconds and support from MaxPlayer experts.

While you think about it, your competitor is already offering your customer a better app.
